

# AXIS 241 Video Servers

*Full-featured digital benefits  
for analog surveillance systems*

AXIS 241 Video Servers from the market leader in network video, are designed to migrate your analog investments into high-performance IP solutions, ideal for surveillance and remote monitoring.

The AXIS 241 Video Servers accommodate one or four analog video streams depending on the model. System integration and network utilization are optimized with sophisticated functions such as built-in motion detection, SNMP and simultaneous Motion JPEG and MPEG-4 streams. Powerful event management tools include image upload, alarm notification and I/O control. Pan/tilt/zoom control is done over the serial port, enabling PTZ and dome camera handling over the network.

A complete set of security features, including multiple user access levels, HTTPS encryption and IP address filtering, ensure secure video handling and configuration.

AXIS 241QA/SA provide one audio stream in each direction, enabling users to not only see, but also listen in on an area and communicate requests or orders. In addition, they offer a de-interlace filter that improves image quality in the highest resolution (4CIF). This feature eliminates the motion blur problems caused by the analog PAL/NTSC video signal.

- High quality, de-interlaced\* video at 30/25 frames per second per channel
- Simultaneous Motion JPEG and MPEG-4 streams in resolutions up to 768x576
- Video motion detection and pre/post-alarm buffer
- Support for PTZ and dome cameras
- HTTPS encryption for network security
- Integrated two-way audio support\*
